

Elver Yamit Tobo Ramirez

Software Engineer with more than four years of professional experience building backends, APIs, and solutions with Python and AWS. I have experience in serverless architecture, Linux, distributed systems, security, observability, production debugging, and infrastructure as code. I am highly committed to learning and continuous improvement, assertive communication, teamwork, and understanding the company's objectives and needs beyond the code.

EXPERIENCE

Fluid Attacks — Security Developer

Noviembre de 2021 - Noviembre de 2025

Worked under a horizontal engineering model, contributing to incident management, data analysis, backend development, AWS cloud services, generative AI, and DevOps practices with GitLab..

- Migrated Fixes, a module used by approximately 80% of the company's users, from a server-based architecture to a serverless architecture using Lambda and API Gateway, reducing CI/CD time by approximately 90%.
- Implemented a CVE inventory system that integrated data from NIST and GHSA and used AI to prioritize the creation of SAST and CSPM checks for clients' repositories and cloud environments.
- Developed SAST and CSPM checks to detect vulnerabilities in clients' code repositories and cloud environments.
- Built backend features on AWS, remediated vulnerabilities, and resolved production incidents through debugging, log analysis, root cause analysis, and postmortems.

EDUCATION

Politécnico Grancolombiano — Software Engineer

September 2018 - August 2023

PROJECTS

NotiCrypt — Crypto Market Analysis and Event Alerts

Cryptocurrency alert and market monitoring SaaS project. I developed the MVP end to end, including alert logic, backend, frontend, authentication, database design, integrations, notifications, and deployment. The project strengthened my experience in SaaS development, system architecture, artificial intelligence, APIs, and product development.

Stack: Python, TS, React, Vite, FastAPI, Aiogram, SQLAlchemy, LangGraph, LangChain, OpenAI, LangSmith, Lambda, EC2, DynamoDB, S3, SNS, PostgreSQL, Terraform, GitLab CI/CD, Bugsnag, uv.
